

The
customer-
centric advisory
of the future

FOR THE FINANCIAL-INDUSTRY

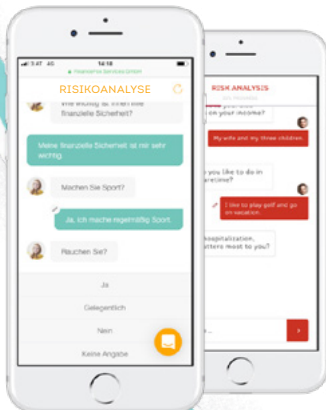

FOR SALES AGENTS

INTELLIGENT SOLUTIONS FOR DIGITAL ADVISORY

Real-time calculations during the advisory process: state benefits and resulting gaps, individual risk profiles, coverage amount and product recommendations

The next best question arises from previous answers. Questions and answers are constantly adapted to the customer. As the user answers, the algorithm processes the obtained information in parallel.

Detailed background information on all risks, it can be used as preparation for the interview and supportive guideline through the entire advisory process

FOR CUSTOMERS

CHATBOTS, WEB & PORTAL SOLUTIONS

Selected questions are shown to the user.

Frontend-specific texts can be generated from the conversation model. For example, customers are shown shorter texts when interacting via chatbot or longer texts when using a tablet/laptop.

The customer solutions interact with the sales agents' solutions.

STRUCTURE & COMPOSITION

THE RISKINE SOLUTION

The interaction of the graph database with the algorithms enables intelligent digital conversations.

CONVERSATION MODEL
PROVIDES QUESTIONS

DATA & ALGORITHMS
PROVIDE INTELLIGENCE

BENEFIT
