

Asseco Digital Insurance

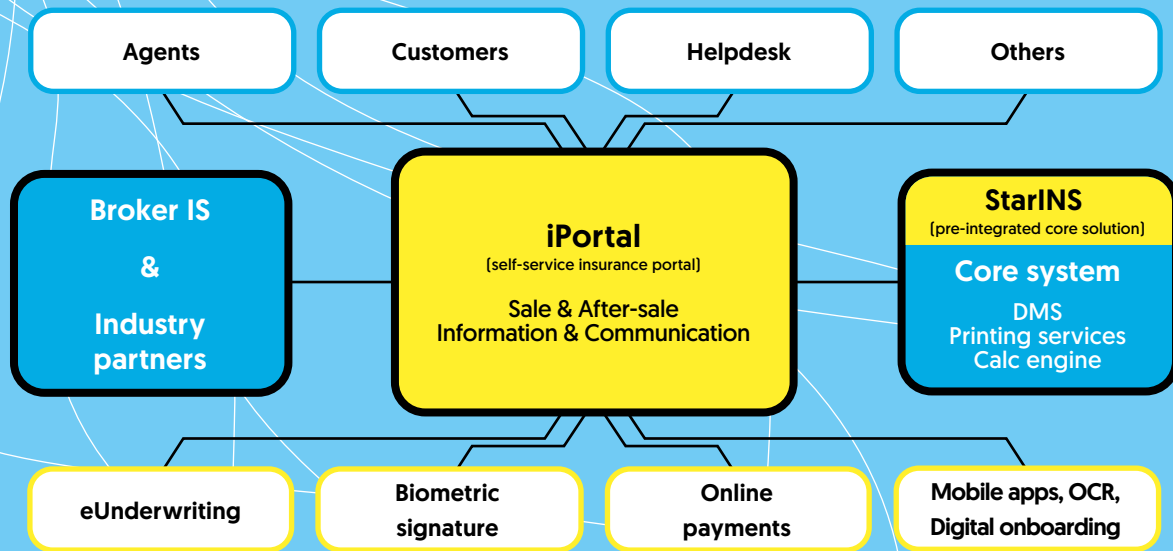

The Asseco Digital Insurance Ecosystem represents a multi-sided platform bringing together different consumers from insurance industry to benefit from newest technologies, facilitate information exchange, streamline sale and after-sale processes, improve customer relationship and loyalty.

The platform integrates the Asseco iPortal and other smart solutions supporting electronic risk assessment, biometric and/or vector signature, 100% paperless processing, digital onboarding and OCR technologies forming a digital front-end ecosystem.

This platform is open for integration with other third-party solutions such as back-office solutions, smart solutions supporting AI and machine learning technologies and more.

We believe, digital technologies are here to motivate consumers to use them, improving their journey in the world of insurance. Digitization of business processes significantly reduces efforts and increases comfort of consumers when interacting with insurance carriers. They lead to minimize back office operations by “expelling” the most requested services to the front-end platforms. Building intelligent solutions means bringing transparency into insurer-consumer interaction.

Business Platforms of Asseco Digital Insurance Ecosystem

Sales

- Online generation of quotes
- Generation of up-sell and cross-sell opportunities
- Data analytics/KPIs
- Product information
- Sales promotion

Service

- Online management of policy endorsements
